## Software update iphone 4s ios 10

If you're drooling at the prospect of interactive notifications on the lock screen, all the new messaging deliveries or anything else that iOS 10 will bring to Apple's mobile platform, you'll want to try it as soon as possible - and now you can. While Apple has officially released iOS 10 and iOS 10.0.1, later versions of the operating system are or will stay in beta. Keep in mind that any beta version of iOS 10 may be riddled with errors and many of your apps aren't working properly. You can decide a taste of the exciting new features is worth it, but we strongly advise against installing iOS 10 beta on any device you depend on. This warning even includes the public release of iOS 10, which has suffered a few problems in itself since its debut. Back up and save your data To install iOS 10, be sure to save an iOS backup. To do this, first make sure you have the latest version of iTunes. If it's up to date, connect your iOS device to your computer and open iTunes. If you're interested in backing up your health and activity data, check the Encrypt [device] box back and create a good password. Save this password because there is no other way to restore the backup without it. If you don't want to save your health and activity data, just click Back Now. When the backup is complete, go to iTunes &t; Settings &t; Devices on your computer, click the backup you made, and select Archive to save it. Now for iOS 10 - to start, make sure your device can run iOS 10. Here's the full list of iOS devices that support iOS 10. How to download iOS 10 You can download and install iOS 10 in the same way you downloaded previous versions of iOS — either download it over Wi-Fi or install the update using iTunes. Provided your device can run it, it's easier for the two methods via Wi-Fi. On your device, go to Settings &t; General &t; Software Update and the update for iOS 10 (or iOS 10.0.1) appears. In iTunes, simply connect your device to your computer, select the device, and then choose History &t; Check for Update. If an update is available, select Download and Update. For the basic version of iOS 10, you'll need 1.1GB of free space. If you need to free up space, go to Settings &t; General &t; Storage & iCloud Usage &t; Manage Storage (under Storage, not the iCloud setting). How to download the public iOS 10 beta The process of getting iOS 10 beta on your supported device is relatively simple. But first, check if your device is running iOS 8.1.3 or later — you'll automatically receive the latest public beta software via an over-the-air update if your device matches that version number or is higher. To trigger it manually, simply on Settings &t; general &t; software update to install it. If you're on an older version, the steps are still pretty straightforward. Go to beta.apple.com/sp/betaprogram to get started. Click Sign up and you will be asked to sign in with your Apple ID, or create a new one if you don't have one. Once you're signed in, scroll down to Get Started and click sign up for your iOS device. You will be asked to archive an iOS backup, as we mentioned above. If you've already done it, all you have to do is go to beta.apple.com/profile on the iOS device you want to install beta on. You'll be prompted to install a configuration profile — just tap Download Profile and follow the on-screen instructions to complete the installation. That's it, you now have iOS 10 beta on your device! Scrolling back to the current version of iOS Betas may be unstable, which means it's understandable if you want to scroll back to an earlier version of iOS. You can do this by first making sure your iTunes is up to date. Then: Connect your iOS device to a computer and open iTunes. Press and hold the Sleep/Sleep and Home buttons for at least 10 seconds and hold them down when you see the Apple logo until the restore mode screen appears. You see a Restore or Update option, choose Restore. If you found my iPhone on, enter your Apple ID and password afterwards to activate your device. When you're done, iTunes allows you to set up as a new phone or restore from this backup. Here you can choose from any backups you made using an earlier version of iOS. How developers can download iOS 10 beta If you have a developer account with Apple, you can download the version of iOS 10 beta in the same way or through the developer's website. Go to the Apple Developer website, sign in, and download the package. You can use iTunes to view your data and then install iOS 10 on any subs. You can also download a configuration profile directly to your iOS device and then download the OTA update by going to Settings &t; &t; Software Update. Whichever method you choose, there's no limit to how many devices you can install iOS 10 on as long as they're associated with your developer account. To register a device. Sign in to your account on Apple's developer site. Click Certificates, Identifiers & Profiles. Look for All under Devices on the left side, and click the add-on sign to add your device. You must enter UDID. You can find it by starting iTunes and connecting your device. Locate your device in the right pane and display the UDID by clicking Serial Number. If you're wondering, the Apple Developer program costs \$99 a year and you can sign up here. Editors' Recommendations Page content loaded Dec 1, 2016 4:16 PM in response to tyo2020 In response to tyo2020 An iPhone 4 cannot be updated past 7.1.2, and an iPhone 4S cannot be updated by 9.3.5; iOS 10 requires an A6 or better CPU. To update an iOS device running 5.0 or later to the latest compatible version, use the feature or update it from iTunes on a computer.
